Daniel Bodnar

Platform Engineer | Systems Architect | SRE | Linux Evangelist | Emerging Technologist

✉ daniel@bodnar.sh ☎ (940) 247-0019 ⌂ Corinth, Texas ⚙ github.com/danielbodnar 🌐 resume.bodnar.sh

I'm a platform engineer and solutions architect with more than 25 years of experience, including customer-facing consulting and professional services through my own firm. At Patterson Companies, I partnered with an Account Executive to take a Cloudflare pricing product from proof of concept to client demo in about two weeks, then wrote the runbooks so others can run it.

EXPERIENCE

Platform & SRE Engineer

Apr 2026 - Present

Patterson Companies, Animal Care Technologies (ACT Data)

Research, architect, and build Cloudflare products, platforms, and internal tools for ACT Data, the veterinary practice-software business of Patterson Companies, then hand them off with runbooks, docs, and training

- Built company-wide AI skills, plugins, and policies, then led workshops on using agents well, safely, and affordably
- Partnered with Sales and Account Executives to design, build, and launch three new products and revenue streams
- Built all three on Cloudflare for a small fraction of the cost of bare-metal servers or a managed analytics database
- Designed and built internal tools for engineering and operations, then handed ownership to the teams that use them
- Leading the rollout of Cloudflare SASE, Zero Trust, and Developer Platform, and the migration off legacy infrastructure

`Cloudflare Workers` `D1` `R2` `Basin Catalog` `Durable Objects` `Workers Analytics Engine` `Cloudflare Access` `WAF` `DuckDB` `PostgreSQL` `Grafana` `Rust` `TypeScript` `Astro` `Svelte` `Claude Code`

Founder, Cloud Architect, CIO

May 2021 - Present

BitBuilder Cloud & Consulting, LLC

Founded a cloud hosting and consulting SaaS company providing vendor-agnostic, end-to-end encrypted, highly-available infrastructure for organizations requiring resilient, security-first platforms

- Containerized and load-balanced several high-profile organizations with 1M+ global visitors/day
- Multi-cloud hybrid overlay layer based on custom Kubernetes distribution and immutable Linux systems
- Comprehensive observability stack using Grafana, Prometheus, VictoriaMetrics, NetData, and Jaeger
- Manage consulting accounts for small businesses: Neal & Neal Insurance and Maybach Systems, including systems and infrastructure architecture, security and incident mitigation

`Proxmox` `Kubernetes` `Docker` `Linux` `Bare Metal` `ZFS` `NVMe` `Grafana` `Prometheus` `VictoriaMetrics` `NetData` `Jaeger` `Load Balancing` `Multi-cloud` `Hybrid Infrastructure` `E2E Encryption`

Principal Software, DevOps, and Cloud Engineer

Jul 2023 - Mar 2025

Fidelity Investments

Designed and built a full AWS CDK platform enabling various teams to rapidly deploy standardized, compliant infrastructure, reducing provisioning time

- Rebuilt and optimized the Jenkins Core platform, increasing build efficiency and reducing pipeline execution times
- Architected comprehensive AWS solutions for enterprise applications, including secure networking topologies and multi-account strategies adhering to strict financial industry security standards
- Engineered Kubernetes-based deployment solutions leveraging EKS, Helm charts, and custom operators, supporting production applications
- Created a cloud orchestration CLI tool that simplified cross-account resource management, eliminating manual processes and bottlenecks
- Implemented infrastructure-as-code practices across several teams, reducing configuration drift and deployment errors
- Designed and implemented automated security scanning and compliance checking within CI/CD pipelines

- Led knowledge-sharing sessions and developed documentation to elevate team capabilities in cloud-native technologies

AWS | AWS CDK | CloudFormation | Kubernetes | EKS | Helm | Jenkins | Docker | IAM | Terraform | Python | Node.js | Infrastructure-as-Code | CI/CD

SRE, SysAdmin, and Platforms Engineer

Mar 2019 – May 2021

Animal Care Technologies, INC

Architected, deployed, and managed dynamically scaling bare-metal Kubernetes clusters; led all migrations from legacy systems to Kubernetes

- Managed and performance-tuned 3.5TB+ PostgreSQL database cluster, plus numerous MySQL and SQLite databases
- Mitigated two ransomware attacks within the first month of employment, then implemented organization-wide security measures including Wireguard VPN, VLANs, and zero-trust access for third-party developers
- Deployed self-hosted GitLab with DevOps pipelines and automatic blue-green deployments, implementing Infrastructure-as-Code using Terraform, Packer, and Ansible
- Consolidated disparate hypervisors into a centralized Proxmox cluster on ZFS with 56G InfiniBand FC SAN
- Implemented comprehensive observability (Grafana, Loki, Prometheus, Jaeger, ELK, Zabbix) to preemptively identify bottlenecks and capacity constraints

Kubernetes | PostgreSQL | GitLab | Docker | Proxmox | ZFS | InfiniBand | Ansible | Terraform | Wireguard | cri-o | containerd | haproxy | nginx | traefik | Helm

---

IT Director

May 2017 – Mar 2019

Perspectives.org

Led IT operations for an international non-profit providing in person college-level courses serving 10,000+ students annually across 250+ classes worldwide

- Increased cloud hosting capacity by 10x while reducing budget by 50%
- Reduced page load times from 5 seconds to 0.8 seconds average
- Developed 5-year roadmap to rebuild legacy monolithic .NET 3.5 application into micro-service architecture
- Built a DRM-secured, offline-enabled streaming video player desktop app in Go for classes with unreliable internet
- Led IT team, support department, and India-based development team
- Volunteer Contributions (2012-2014): Created an online Learning Management System from scratch, reducing administrative overhead by 90% and architected horizontally scaling container orchestration platform (Docker, Rancher, AWS Spot Instances) to handle traffic spikes

Go | Docker | Rancher | AWS | iPXE | .NET | Performance Optimization | LMS

Professional Application Developer

Feb 2014 – May 2017

AT&T Corp.

Full stack engineer building internal tools and services, managing the complete project lifecycle from requirements gathering through production deployment

- Architected and built a large-scale external "Order Status" application aggregating data from 12+ legacy sources (including screen-scraped systems)
- Led team-wide migration from Rails/MySQL to Node.js, Angular.js, and MongoDB, reducing prototype development time significantly
- Engineered Docker-based DevOps pipeline that improved deployment reliability and developer productivity
- Mastered functional programming in JavaScript to build high-performance, parallel-worker pipelines in an asynchronous language

Node.js | Angular.js | MongoDB | Docker | Rails | MySQL | JavaScript | Functional Programming | Microservices | REST APIs

---

Owner / IT Consultant

Dec 2006 – Feb 2014

TACC Support

Owned and operated a local computer repair, IT consulting, and MSP company with physical storefront for 5+ years, managing a staff of 5 employees. Later evolved into small business IT and Systems Architect Consulting

- Full company name: Technicians Against Computer Cruelty
- Provided computer repair, network administration, and infrastructure systems architecting for several small businesses accounts: Babes Chicken, Justin Boots, Paddock Farms, DIAB Inc.
- Virtualized the entire US-based multi-site server infrastructure (~30 bare-metal servers) onto ESXi for international plastics manufacturing company, DIAB Inc.

ESXi | Windows Server | Network Administration | IT Consulting | MSP

TECHNICAL SKILLS

* **Linux Ecosystem:**	Linux, Shell Scripting, Containerization, Kernel-level Optimizations, SRE, Platform Engineering, Network Engineering
* **Operating Systems:**	Alpine, Debian, Ubuntu Server, Arch, FreeBSD, WolfiOS
* **Containerization/Orchestration:**	Docker, Linux containers, Kubernetes, Buildroot, DevContainers, LocalStack
* **Languages:**	Rust, JavaScript, TypeScript, Bash, Shell
* **Frontend Frameworks:**	Vue.js, Nuxt.js, Svelte, SolidJS, Alpine.js
* **Backend:**	Node.js, Rust
* **Infrastructure:**	Terraform, Ansible, GitLab CI/CD, GitHub Actions
* **Databases:**	PostgreSQL, SQLite, DuckDB, MongoDB, MySQL
* **Networking:**	WireGuard, ZeroTier, Tailscale, OpenVPN, Layer 2/3, BGP
* **API Development:**	OpenAPI, JSON Schema, RESTful API design
* **Cloud Platforms:**	AWS, AWS CDK, CloudFormation, IAM, EKS, GCP, Multi-cloud strategy
* **Monitoring & Observability:**	Grafana, Prometheus, VictoriaMetrics, NetData, Jaeger, ELK Stack, Distributed Tracing
* **Security:**	Zero-trust architecture, Vulnerability Scanning, Intrusion Detection, VPN, Traffic Analysis
* **Architecture Patterns:**	Microservices, Distributed Systems, API Gateway, Service Mesh, Event-Driven Architecture, CQRS
* **DevOps & Automation:**	CI/CD Pipelines, GitOps, Infrastructure as Code, Self-healing Systems, Auto-scaling

INTERESTS

Hardware hacking: Reverse-engineering ASUS router firmware, editing UEFI firmware, and CNC machining

Router firmware, UEFI (Aptio V), CNC, FPGA

Image-based Linux: Building a git-ops, multi-tenant hypervisor on systemd's vmspawn, nspawn, and sysext stack

systemd, UKI, DDI, ZFS

Agent tooling: Writing Claude Code plugins, skills, and MCP servers, and running coding agents in sandboxes

Claude Code, MCP, Cloudflare Sandboxes
